## EDUCATION

---

**University of Maryland, College Park**

*B.S. in Computer Science & Statistics*

May 2020

*GPA 3.5*

Relevant Coursework:

- Machine Learning
- Software Engineering
- Algorithm Design
- Database Design
- Probability Theory
- Data Science
- Comp. Methods
- Artificial Intelligence

## EXPERIENCE

---

**Lockheed Martin**

*Software Engineering Intern*

Jun 2019 - Aug 2019

*Rochester, NY*

- Re-designed, built and tested a data analysis tool in Python used by data scientists and engineers every day
- Overhauled the documentation and fielded maintenance and feature requests for the tool
- Built an internal package management system to boost daily productivity for data scientists, engineers and developers
- Developed statistical models around faults in data transfer systems to assist struggling sectors
- Constructed a proof of concept Kafka cluster visualization tool as a side project

**University of Maryland**

*Undergraduate Researcher*

Jan 2017 - Present

*College Park, MD*

- Received the competitive Maryland Summer Scholars grant which is given to less than 30 undergraduates each summer
- Researched and implemented new data oriented vulnerability detection processes for use in the context of software development
- Wrote a full technical report describing experimental design and results along with a poster presenting those findings

**National Institute of Standards and Technology**

*Scientific Programmer*

Jun 2018 - Aug 2018

*Gaithersburg, MD*

- Developed a web scraping tool to harvest solar panel output and power grid usage from utility websites
- Pioneered the overhaul of a 10 year old flame speed analysis program written in C++ to update it to modern code standards and make it more maintainable in the future while increasing the speed of calculations
- Worked with researchers directly to develop tests for the programs and make sure the new methods weren't negatively affecting the accuracy of the results
- Documented the resulting code thoroughly to ensure the future health of the program

## Projects

- NetZero – An extensible tool to collect, manage, and analyze several data sources. Meant to be used when analyzing the efficiency of a house.
- Trigger Happy – A computer vision enabled smart nerf gun that prevents what would be lethal shots. Won HackPSU.
- LookOwtBot – A facebook messenger bot that supplies students with timely reminders for their assignments.

## TECHNICAL STRENGTHS

---

**Programming Languages**

Python, C++, C, Java, Haskell, Rust, OCaml, SQL

**Tools**

Git, Linux, Windows, Research Processes, Agile Methodologies

**Other**

AutoCAD, L<sup>A</sup>T<sub>E</sub>X, MatLab, Microsoft Office
